The invention relates to a novel fusion protein comprising a fibrinogen-
like domain (FLD) or colled-coil domain (CCD). The domain may be
identical or homologous to that of an angiopoietin-related factor (ARF),
examples of which include Ang (angiopoietin)-1, Ang-2, Ang-3, Ang-4 and
Ang-2x. The molecules of the invention demonstrate vulnerary,
antiinflammatory and vasotropic activities whilst the fusion protein may
be useful for preparing a composition for treating necrosis, ischaemia or
inflammation, as well as for promoting wound healing. The current
sequence is that of the human fibrinogen beta protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel fusion protein comprising a fibrinogen-
like domain (FLD) or coiled-coil domain (CCD). The domain may be
identical or homologous to that of an anglopolatein-related factor (ARF),
examples of which include Ang (anglopolatin)-1, Ang-3, Ang-4 and
Ang-2x. The molecules of the invention demonstrate vulnerary,
antiinflammatory and vasotropic activities whilst the fusion protein may
be useful for preparing a composition for treating necrosis, ischaemia or
inflammation, as well as for promocing wound healing. The current
sequence is that of the human fibrinogen beta protein of the invention.

The present invention relates to oligonucleotides (see AAL26793-AAL34659)
encoding polymorphic variants of proteins related to amylases, amyloid
proteins, anglopoleith, apoptosis related proteins, cadherin, cyclin,
polymerase, oncogenes, histones, kinases, colony stimulating factors,
complement related proteins, cytochromes, kinesins, cytokines,
interleukins, G-protein coupled receptors and thioesterases.
The present sequence is a peptide encoded by them may be used in the
prevention, diagnosis and treatment of diseases associated with
prevention, diagnosis and treatment of diseases associated with
prevented, diagnosed and/or treated include multifactorial diseases
with a genetic component, such as autoimmune diseases (e.g. rheumatoid
arthritis, multiple sclerosis, diabetes, systemic lupus erythromatosus
and Grave's disease), inflammation, cancer (e.g. cancers of the bladder,
brain, breast, colon and kidney, leukaemia), diseases of the nervous
                                                                                                                                                                                                                                   neuroprofective; antimicrobial; gene therapy; vaccine; amylase; cancer; amyloid protein; angiopoletin; apoptosis related protein; cadherin; cyclin; polymerses; oncogene; histone; kinase; colony stimulating factor; complement related protein; cytochrome; kinesin; cytokine; interferon; interleukh; G-protein coupled receptor; thioesterase; inflammation; multifactorial disease; autoimmune disease; infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Polymorphic nucleic acids encoding e.g. amylases, cyclins, polymerases, oncogenes and histones, useful for diagnosing and treating, e.g. cancer, autoimmune diseases and infections.
                                                                                                                                                                                                                  Immunosuppressive; immunostimulatory; antiinflammatory; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 14;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention comprises a method for screening or diagnosing kidney toxicity. The method involves the use of the following proteins: Thiningoen, inter-alpha-inhibitor H4P heavy chain, alpha-1-macroglobulin, appolipoprotein E, clusterin, complement C3, complement C4, fibrinogenalpha-chain, fibrinogen-beta-chain, and plasma retinol binding protein. The method of the invention is useful in screening or diagnosing kidney coxicity (e.g. renal tubular necrosis). The method is also useful for monitoring the effectiveness of treatment for kidney toxicity and for screening and developing drugs. The present amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Screening or diagnosing kidney toxicity, useful in monitoring effectiveness of treatment for kidney toxicity or for screening and developing of drugs, by detecting and quantifying T-kininogen and inter-

prevention, diagnosis and treatment of diseases associated with inappropriate expression of the proteins listed above. Disorders that may be prevented, diagnosed and/or treated include multifactorial diseases with a genetic component, such as autoimmune diseases (e.g. rheumatoid arthritis, multiple sclerosis, diabetes, systemic lupus erythromatosus and Grave's disease), inflammation, cancer (e.g. cancers of the bladder, brain, breast, colon and kidney, leukaemia), diseases of the nervous system and an infection of pathogenic organisms
                                                                                                                             Immunosuppressive; immunostimulatory; antiinflammatory; cytostatic; neuroprotective; antimicrobial; gene therapy; vaccine; amylase; cancer; amyloid protein; angiopietin; apoptosis related protein; cadherin; cyclin; polymerase; oncogene; histone; kinase; colony stimulating factor; complement related protein; cytochrome; kinase; cytokine; interferon; miterfleukin; G-protein coupled receptor; thioesterase; intlammation; nervous system disease; autoimmune disease; infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to oligonucleotides (see AAL26793-AAL34659) encoding polymorphic variants of proteins related to amylases, amyloid proteins, angiopoietin, apoptosis related proteins, cadherin, cyclin, polymerase, oncogenes, histones, kinases, colony stimulating factors, interferons, interferons, cytochromes, kinesins, cytokines, interferons, interleukins, G-protein coupled receptors and thioseterases. The present sequence is a peptide encoded by one such oligonucleotide. The oligonucleotides and the peptides encoded by them may be used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Polymorphic nucleic acids encoding e.g. amylases, cyclins, polymerases, oncogenes and histones, useful for diagnosing and treating, e.g. cancer, autoimmune diseases and infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score 75; DB 4; Length 14;

The present invention relates to human nucleic acids containing single nucleotide polymorphisms (SNPs). These can be used in forensic and paternity tests, and to aid in the treatment of diseases associated with aberrant protein expression, including cancer, amyloidosis, diabetes, Alzheimer's disease, Down's syndrome, oedema, lupus (SLB), vasculitis, alpmerulonephritis, haemolytic anaemia, thrombocytopaenia, arthritis, meningitis, muscular disorders, dementia, neurological diseases, tuberous sclerosis, male infertility, hypercalcaemia, blood pressure disorders, autoimmunity. The present sequence is a peptiide encoded by a polymorphism-containing oligonucleotide fragment of the invention
                                                                                                                                                                                                                                                                                                                                                Isolated human polynucleotides containing single nucleotide polymorphisms, useful for the treatment and diagnosis of e.g. cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, single nucleotide polymorphism, SNP, paternity test, forensic test; aberrant protein expression.

The present invention provides haptotactic peptides with sequences homologous to sequences found within the C-termini of fibrinogen, and which are characterised by their ability to induce cell attachment to a surface to which the peptide is bound. These are useful in the treatment of wounds and diseases, to separate different types of cells in culture, to analyse cell receptor mechanisms and to design peptide-derivatised drugs. The present sequence is a consensus sequence of haptotactic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Haptotactic peptide liposomal composition, useful for enhancing liposome uptake into cells, comprising peptide capable of eliciting cell attachment responses and sequence similarity to haptotatic peptides and liposome having lipid bilayers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      haptotactic; liposomal composition; carboxy termini; fibrinogen chain;

This invention relates to a novel haptotactic peptide liposomal composition, which comprises at least one type of peptide and one type of liposome, where the peptide elicits cell attachment responses and has an amino acid sequence that is at least 60% homologous to a haptotactic peptide present within the carboxy termini of fibrinogen chains, and the liposome has at least one lipid bilayer enclosing an aqueous compartment. The invention is useful for enhancing liposome uptake into cells or for enhancing intracellular uptake of biologically active composition by low-permeability through the cell membrane using a haptotactic-peptide liposomal composition. The invention may be particularly useful for enhancing the delivery of paramaceutical agent into cells, for enhancing the delivery of paramaceutical agent into cells, for enhancing the delivery of paramaceutical agent into cells, where the liposomes of the composition have a commetic beneficial effect. The present sequence is that of a human-derived haptotactic peptide which may be used during the creation of the compositions of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides haptotactic peptides with sequences homologous to sequences found within the C-termini of fibrinogen, and which are characterised by their ability to induce cell attachment to a surface to which the peptide is bound. These are useful in the treatment of wounds and diseases, to separate different types of cells in culture, to analyse cell receptor mechanisms and to design peptide-derivatised drugs. The present sequence is a homologue of a human fibrinogen C-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, cell attachment peptide; haptotactic; fibrinogen; wound healing; angiopoletin; tenascin; microfibril-associated glycoprotein-4; MFAP4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel haptotactic peptides useful for enhancing wound healing and

This invention relates to a novel haptotactic peptide liposomal composition, which comprises at least one type of peptide and one type of liposome, where the peptide elicits cell attachment responses and has an amino acid sequence that is at least 60% homologous to a haptotactic peptide present within the carboxy termini of fibringen chains, and the liposome has at least one lipid bilayer enclosing an aqueous compartment. The invention is useful for enhancing liposome uptake into cells or for enhancing intracellular uptake of biologically active compounds by low-permeability through the cell membrane using a haptotactic-peptide liposomal composition. The invention may be particularly useful for enhancing the delivery of paramaceutical agent into cells, for enhancing the delivery of paramaceutical agent into cells or for enhancing the delivery of paramaceutical agent into cells or for enhancing commetically effective liposomes into cells, where the liposomes of the composition have a cosmetic beneficial effect. The present sequence is that of a human-derived haptotactic peptide which may be used during the creation of the compositions of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Haptotactic peptide liposomal composition, useful for enhancing liposome uptake into cells, comprising peptide capable of eliciting cell attachment responses and sequence similarity to haptotatic peptides and

The invention relates to the isolation of genes AAC73865-C73913 encoding the human secreted proteins AAB39093-B39141. This sequence represents a pertide fragment homologous to the protein encoded by the gene isolated in the present invention. The sequence is a search result from a BLASTX homology search. The genes and proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of:

(a) cancer, e.g. breast and ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections
                                                                                                                                                                               Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; anticonvulsant; antibeterial; antifungal; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; secreted protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Forty-nine polynucleotide sequences, and their encoded secreted polypeptides, used in the treatment and diagnosis of cancers, autoimmune

The invention relates to the isolation of genes AAC73865-C73913 encoding the human secreted proteins AAB3903-B39141. This sequence was used as a query sequence for doing BLASTX searches to determine homologous sequences to the protein isolated in the present invention. The genes and sequences to the protein or gene therapy. The genes are isolated from conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the alagnosis, proteins, and other cancers of the adrenal gland, bone, bone ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The invention relates to a novel predictor set comprising a plurality of polymucleotides and/or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase activity or members of the protein tyrosine kinase pathway. The molecules of the invention demonstrate cytostatic, antiangiogenic, vasotropic and vulnerary activities and may be useful in the field of pharmacogenomics, in particular for determining drug sensitivity and in treating breast cancer, hypervascular diseases, angiogenesis and scars in wound healing. The current sequence is that of a human protein tyrosine kinase biomarker protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        fibrinogen gamma' chain; transgenic animal milk; treatment; beta-lactoglobulin signal peptide fusion protein;
                                                                                                                                                                                                                                                                                                                                           New predictor sets with a plurality of polynucleotides and/or polypeptides whose expression pattern predicts cell response to a compound that modulates protein tyrosine kinase activity, useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              51.7%; Score 60; DB 8; Length 437; 64.7%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to CDNA sequences that are differentially expressed in respiratory disorders or their complements or encoded proteins. The CDNAs and proteins are useful for diagnosing, treating or monitoring treatment of a subject with a respiratory disease including lung cancer, chronic obstructive pulmonary diseases, emphysema or asthma. The protein is also useful for screening molecules or compounds to identify at least one ligand which specifically binds the protein. It is also useful for preparing and purifying a polyclonal or monoclonal antibody. This sequence corresponds to a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           predictor set; protein tyrosine kinase; cytostatic; antiangiogenic; vaotropic; vulherary; pharmacogenomic; drug sensitivity; breast cancer; hypervascular disease; angiogenesis; wound healing scar; human; biomarker; fibrinogen gamma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New combination comprising cDNAs and proteins that are differentially expressed in respiratory disorders, useful for disgnosing or treating respiratory diseases e.g. lung cancer, chronic obstructive pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                         The alternatively spliced human fibrinogen gamma' protein is produced by alternative splicing at nucleotides 9511 and 10054 of AAT03854 resulting in translation terminating after nucleotide 10065. Human fibrinogen gamma' chain may be produced recombinantly, preferably by sheep betalactoglobulin signal peptide fusion protein gene expression in non-human transgenic animal milk, preferably of a sheep, pig, goat or cattle. Coexpression with the fibrinogen A-alpha chain (see AAR8244) and the B-beta chain (see AAR82243) results in the production of active fibrinogen, which is useful in human and veterinary medicine, e.g. in the formulation of surgical adhesives, which also consist of Factor-XIII, and as a coating surface for polymeric articles, such as synthetic vascular grafts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ጵ።

The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a method for identifying a compound for identifying a compound or small molecule that regulates the
                                                                                                                                                                                                                                                              ö
non-human transgenic animal milk, preferably of a sheep, pig, goat or cattle. Co-expression with the fibrinogen A-alpha chain (see AAR82244) and the B-beta chain (see AAR82243) results in the production of active fibrinogen, which is useful in human and veterinary medicine, e.g. in the formulation of surgical adhesives, which also consist of Factor-XIII, and as a coating surface for polymeric articles, such as synthetic vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                              Gaps

```
ö
activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymuclectide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               comprising at least one polypeptide selected from 55 proteins up-
regulated in pancreatic cancer (Table 2 and Table 3, given in the
specification) or from 68 proteins with higher levels in pancreatic
cancer compared to normal tissue (Table 6, given in the specification).

(I) is a polypeptide for use as a marker or as a component of a marker
for diagnosis of pancreatic cancer and/or the susceptibility to
pancreatic cancer. A compound (antibody, an antibody-derivative, an
antibody fragment, a peptide, or an antisense construct) identified by
screening methods using (I) is useful for treatment or prevention of
pancreatic cancer. It is also useful for the preparation of a diagnostic
composition for diagnosing pancreatic cancer or a predisposition for
pancreatic cancer. The current polypeptides were found to be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                diagnosis; pancreatic cancer; antibody; antisense construct;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a marker (I) for diagnosis of pancreatic cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New specific markers comprises at least one polypeptide up-regulated in pancreatic cancer, useful for diagnosing pancreatic cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Using the primers AAT05292/93 a 310 bp fragment from a human fibrinogen gamma-chain cDNA clone was amplified, and digested to allow the N-terminal and C-terminal portions of the gamma-chain (a partial nucleotide and anino acid sequence of which is given in AAT05310 and AAR84551, respectively) to be purified. They were then ligated along with the synthetic 3'-end fragment AAT05309, and cloned into a mp19 vector to give mp19gamma2, which encodes a complete gamma-chain. mp19gamma2 was then subcloned into the expression vector pREPP, which was used in the prodn of variant fibrin chains unable to self polymerise. These chains are able to react with fibringen, partic. useful in surgical sealants that do not require thrombin activation, and are pure starting materials for fibrin-derived factors that regulate angiogenesis, platelet aggregation, etc

                                                                                                                                                                                                                                                                                                                                                                                             polymerize but forms non-covalent bond with fibrinogen, useful in surgery for controlling bleeding or adhering tissues to each other.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sealant comprises a recombinant variant fibrin chain differing from the naturally occurring gamma-chain by one or more mutations or deletions in a creaminal region following a colled-coll forming region. When incorporated into a fibrin-homologue, the homologue cannot self-polymerize but forms non-covalent bonds or polymerize with fibrinogen. The fibrin sealants are used in surgery to control bleeding or to adhere two tissues to each other. The recombinant fibrin chains are used may be used in the preparation of safe and convenient surgical adhesives and sealants, and as sources of substantially pure starting material for the production of fibrin-derived factors that regulate angiogenesis, or platelet aggregation. Fibrin and fibrin homologues may be used as components of fibrin monomer-based surgical sealants
                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents the gamma chain of human fibrinogen. The sequence was used to produce a fibrin sealant. The specification describes a fibrin sealant which contains a human fibrin-homologue. The

The present invention relates to ligand/receptor specificity exchangers comprising at least one specificity domain comprising a ligand for a receptor, and at least one antigenic domain joined to the specificity domain, where the antigenic domain comprises an epitope of a pathogen or toxin. The ligand/receptor specificity exchangers redirect antibodies to receptors present on pathogens. They are useful for preventing and treating human diseases such as bacterial, viral, yeast, parasitic and fragal infections, and cancer. These compositions act by inhibiting funcal infections of pathogens, or cancer cells. One of the prophylactic applications of the ligand/receptor specificity exchangers includes coating or crosslinking it to a medical device or implant which include number of bacterial species. Abd2831-ABG6282 represent ligand/receptor cancer calls.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel ligand/receptor specificity exchanger that redirects antibodies to receptors on pathogen or tumor cell, has specificity domain having ligand for receptor, and antigenic domain having epitope of pathogen or toxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cytostatic; antifungal; virucide; antibacterial; antiparasitic; gene therapy; ligand specificity exchanger; specificity domain; bacterial receptor ligand; antigenic domain; cancer; infection; cancer;

The present invention relates to ligand/receptor specificity exchangers comprising at least one specificity domain comprising a ligand for a receptor, and at least one antigenic domain joined to the specificity domain, where the antigenic domain comprises an epitope of a pathogen or toxin. The ligand/receptor specificity exchangers redirect antibodies to teceptors present on pathogens. They are useful for preventing and treating human diseases such as bacterial, viral, yeast, parastic and treating human diseases such as bacterial, viral, yeast, parastic and fungal infections, and cancer. These compositions act by inhibiting proliferation of pathogens, or cancer cells. One of the prophylactic applications of the ligand/receptor specificity exchangers includes coating or crosslinking it to a medical device or implant which include implantable medical devices that tend to serve as foci for infection by a number of bacterial species. Abd622915 and Abd62945-Abg62954 represent ligand/receptor specificity exchanger peptides used in the methods of the present invention
                                                                                                                                                                                                                                                                                                                                                          Novel ligand/receptor apecificity exchanger that redirects antibodies to receptors on pathogen or tumor cell, has specificity domain having ligand for receptor, and antigenic domain having epitope of pathogen or toxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cytostatic, antifungal, virucide, antibacterial, antiparasitic, gene therapy, ligand specificity exchanger, specificity domain, bacterial receptor ligand, antigenic domain, cancer; infection, cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 58; DB 5; Length 27;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a new ligand specificity exchanger comprising a specificity domain comprising a ligand for a bacterial receptor and an antigenic domain joined to the specificity domain and comprising at least 5 and less than 200 consecutive amino acids of a protein from a pathogen or toxin. The ligand specificity exchanger is useful in preparing a composition for treating e.g., cancer or infections caused by virus, bacteria, parasite, fungus or yeast by redirecting existing antibodies to pathogens and cancer cells. This is the amino acid sequence of a ligand/receptor specificity exchanger specificity domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New ligand specificity exchanger comprising specificity or antigenic domain, useful in preparing a composition for treating e.g., cancer or infections caused by virus, bacteria, parasite, fungus or yeast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ligand/receptor specificity exchanger; antibody; pathogen receptor; bacterial infection; viral infection; yeast infection; cancer; parasitic infection; fungal infection; proliferation; antibacterial; virucide; cytoscatic; antibungal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a new ligand specificity exchanger comprising a specificity domain comprising a ligand for a bacterial receptor and an antigenic domain joined to the specificity domain and comprising at least 5 and less than 200 consecutive amino acids of a protein from a pathogen or toxin. The ligand specificity exchanger is useful in preparing a composition for treating e.g., cancer or infections caused by virus, bacteria, parasite, fungus or yeast by redirecting existing antibodies to pathogens and cancer cells. This is the amino acid sequence of a ligand/receptor specificity exchanger of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          peptide inhibitor (PI) obtd. as a plasmin degradation prod. Di of fibrinogen.
                                                                                                                                                                                                                                                                                                                   New ligand specificity exchanger comprising specificity or antigenic domain, useful in preparing a composition for treating e.g., cancer or infections caused by virus, bacteria, parasite, fungus or yeast.

              admixed with other natural or synthetic polymers or coatings on fibres, films, labware or other surfaces, e.g. prosthetic devices. The polymers may be used for binding a wide variety of specific binding materials, as catalytic substances (where the amino acid sequence may specifically chelate a wide variety of elements), as purification media, composites, laminates or adhesives. They may also be combined with inorganic or organic materials such as carbon fibres, nylon fibres, nitrocellulose, etc., as flask coatings or in synthetic matrices for the growth and study of cells, as affinity columns or as supports for biological materials. The polymers have collagen-like properties, but may be easily expressed in micro-organisms in high efficiency. The new sequences can be tailored to give the desired properties
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The amino acid sequence of the protein polymer adhesion substrate (PPAS) 1-D monomer repear unit. The sequence comprises 2 repeats of the CLP 3.7 gane encoded sequence linked to the human fibrin PoLSITE sequence and the human fibrin-derived peptide 9.2 (ARR80116; comprising an altered C-terminal 17 amino acid from human fibrin) and used to produce the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pendent group; repeating unit; enzyme recognition site; sealant; fibrin; enzymatic cross-linking; biocompatible material; structural integrity; medical adhesive; wound closure; tissue repair; transglutaminase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Protein polymers comprising repeating units and sequences - capable of enzyme-catalysed covalent bond formation useful as a biocompatible material for wound closure and tissue repair.
 The products may be used as films, fibres, moulded objects
                                                                                                                                                                                                                                                                                                                      Gaps

A 59 kDa PPASI-C polymer (see AAW49712) comprising 10 repeats of the monomer has been expressed in Escherichia coli HB101 transformants. Claimed recombinant proferin polymers are capable of covalent crosslinking by enzymatic reaction to form products which set quickly and have good adhesive properties and high strength. CLP (collagen like protein) polymers are extremely soluble in water, allowing protein solutions of over 10 wt. % to be formed while maintaining good flow properties. CLP polymers have good adhesion to hydrophilic surfaces and therefore may adhere well to tissue. The fibrin peptide 93.4 inserts of PPASI-C provide lysine donor sites for Pactor XIIIa mediated cross-linking. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New recombinant protein polymers - containing naturally occurring repetitive units for crosslinking by enzymes, useful as medical adhesives and sealants, depots and matrices.
polymer adhesion substrate (PPAS) 1-D (AAR80333). The polymers can be used in biological systems where in situ formation of a biocompatible material with structural integrity is required e.g. as medical adhesives and sealants or for wound closure or tissue repair

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Potein polymer adhesive substrate PPASI-D monomer comprises human fibrin gamma POLSITE inserted into a structural backbone of collagen repeat motifs (see AAW4711). A PPASI-D polymer (see AAW49722) has been expressed in Escherichia coli HB101 transformants. Claimed recombinant protein polymers are capable of covalent crosslinking by enzymatic reaction to form products which set quickly and have good adhesive properties and high strength. CLP (collagen like protein) polymers are extremely soluble in water, allowing protein solutions of over 10 wt.% to be formed while maintaining good flow properties. CLP polymers have good adhesion to hydrophilic surfaces and therefore may adhere well to tissue. The fibrin PoLSITE confers the ability to polymerise adjacent fibrin molecules through thair specific interaction with the N-terminal residues of the fibrin alpha chain. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                New recombinant protein polymers - containing naturally occurring repetitive units for crosslinking by enzymes, useful as medical adhesives and sealants, depots and matrices.

Pendent group, repeating unit, enzyme recognition site; sealant, fibrin, enzymatic cross-linking, biocompatible material; structural integrity; medical adhesive; wound closure; tissue repair; transglutaminase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The amino acid sequence of the protein polymeric adhesion substrate (PPAS) 1-D. The protein comprises 2-20 repeats of the PPAS1-D monomeric repeat (AAR80312) which consists of the CLP 3.7 gene encoded sequence (AAR8031) linked to the human fibrin POLSITE sequence and the human fibrin cross-linking substrate peptide 93.2 sequence (AAR80316). The polymers can be used in biological systems where in situ formation of a biocompatible material with structural integrity is required e.g. as medical adhesives and sealants or for wound closure or tissue repair
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Protein polymers comprising repeating units and sequences - capable of enzyme-catalysed covalent bond formation useful as a biocompatible material for wound closure and tissue repair.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Protein polymer adhesive substrate PPAS1-D comprises multiple repeats of a monomer (see AAW49721) consisting of human fibrin POLSITE inserted into a structural backbone of collagen repeat motifs (see AAW49711). The PPAS1-D polymer has been expressed in Escherichia coli HB101 transformants. Claimed recombinant protein polymers are capable of covalent crosslinking by enzymatic reaction to form products which set quickly and have good adhesive properties and high strength. CLP (collagen like protein) polymers are extremely soluble in water, allowing protein solutions of over 10 wt.* to be formed while maintaining good flow properties. CLP polymers have good adhesion to hydrophilic surfaces and therefore may adhere well to tissue. The fibrin FOLSITE confers the ability to polymerise adjacent fibrin molecules through their specific interaction with the N-terminal residues of the fibrin alpha chain. (Updated on 25-
                                                                                                                                                                                                                           New recombinant protein polymers - containing naturally occurring repetitive units for crosslinking by enzymes, useful as medical adhesives and sealants, depots and matrices.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Hepatic parenchymal cell growth factor; HPGF; liver diseases;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents a unnatural collagen-like polymer of the invention. The products may be used as films, fibres, moulded objects and admixed with other natural or synthetic polymers or coatings on fibres, films, labware or other surfaces, e.g. proethetic devices. The polymers may be used for binding a wide variety of specific binding materials, as catalytic substances (where the amino acid sequence may specifically chelate a wide variety of elements), as purification media, composites, laminates or adhesives. They may also be combined with inorganic or organic materials such as carbon fibres, nylon fibres, infrocellulose, etc., as flask coatings or in synthetic matrices for the growth and study of cells, as affinity columns or as supports for biological materials. The polymers have collagen-like properties, but may be easily expressed in micro-organisms in high efficiency. The new sequences can be tailored to give the desired properties
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

```
Hepatic parenchymal cell growth promoter peptide - is isolated from human or animal liver cell or produced by recombinant techniques and used for therapy of liver diseases.
                                                                                                                                                                                                                                   AAQ77818 encodes AAR65759 rat hepatic parenchymal cell growth factor (HPGF). The protein or the N-terminal peptide (AAR65758) may be used in the diagnosis and treatment of liver diseases, such as liver cancer and cirrhosis. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2; Gaps

Arithe: Choning of fibringen genes and their cDNA.

Arithe: Choning of fibringen genes and their cDNA.

Arithe: Annotation

Rikirschbaum, N.E.; Budzynski, A.Z.

Arithe: A unique protecolytic fragment of human fibringen containing the Aalpha COOH-target annotation; hementin cleavage site

Arithe: A unique protecolytic fragment of human fibringen containing the Aalpha COOH-target annotation; hementin cleavage site

Arithe: A unique protesse from Haementeria ghiliani; the giant South American leech comment: The conversion of fibringen to fibrin is triggered by thrombin, which cleav conversion sites responsible for the formation of the soft clot.

Cromment: The soft clot is converted into the hard clot by factor XIIIa (fibrin-stabil) conversion.

Cromment: All fibringen chains are synthesized in the liver.

C,Comment: The soft clot is converted into the hard clot by factor XIIIa (fibrin-stabil) ger) and between alpha chains (weaker) of different monomers.
C,Comment: All fibrinogen chains are synthesized in the liver.
C,Comment: The two forms of gamma chain, A and B (see PIR:FGHUGB), arise by alternate sgintron, which makes this chain different from the gamma-B chain at positions 434-437 and C,Genetics:

C;Complex: The fibrinogen molecule is a hexamer containing two sets of alpha (see PIR:F ins are contained in the core. Two three-chain coiled coils emerge from this core and c from the distal domain nodes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A; Description: Ildrinogen consulation

A;Introns: The fibrinogen molecule is a hexamer containing two sets of alpha (see PIR:FG ans are contained in the core. Two three-chain coiled coils emerge from this core and coffrom the distal domain nodes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A,Molecule type: protein

A, Notes estable extracted from NCBI backbone (NCBIP:119917)
C, Comment: The alpha chain binds by 2-4 cross-links to the amino end of fibronectin.
C, Comment: The alpha chain binds by 2-4 cross-links to the amino end of fibronectin.
C, Comment: The seponsible for the formation of the soft clot.
C, Comment: The soft clot is converted into the hard clot by factor XIIIa (fibrin-stabiliger) and between alpha chains (weaker) of different monomers.
C, Comment: All fibrinogen chains are synthesized in the liver.
C, Comment: See PIR: FGHUA for the major splice form. It is not known whether this form is

A;Note: the list of introns is incomplete
C;Complex: The fibrinogen molecule is a hexamer containing two sets of three nonidentica ntained in the core. Two three-chain coiled coils emerge from this core and connect it the core.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             188,419/Binding site: carbohydrate (Asn) (covalent) #status absent
